

Feb 14th: Though not all the green lines are on the map, all trails were groomed and trackset at Mt Shark on Feb 13th and 14th (a little in to the 15th). Light snow started falling in the Mt Shark area around 1:30AM, about an hour before the grooming was completed. The snowpack is still very inconsistent throughout the Mt Shark system, but mixing in 10 to 20cm's of new snow has greatly improved the existing base and all of the early season natural hazards are now covered. On the extra 5k of the 15k loop there is one very sharp corner at a high point that has dirt and small rocks mixed in to the snow, and it will likely remain that way until the snow is gone, and be altered in the off season.- *Comment last updated: Feb-15 5AM*
